

Trading Platform Locations

Delta1 Trading Platform instances are deployed in geographically diverse data centers. We also provide a sandbox instance of the Delta1 Trading Platform for User Acceptance Testing. Most instance services are not available over general internet. To gain access, a VPN or Direct Connection to a Delta1 data center presence is required.

Overview:

Trading Platform Instances

A trading platform instance is a fully functioning deployment of the Delta1 Trading Platform that supports order entry, trade reporting, and streaming market data.

- **Production** - The primary instance of the trading platform
- **Disaster Recovery** - A geographically separated instance of the trading platform
- **User Acceptance Test** - A full service instance of the trading platform available for customer sandbox testing

Data Center Deployments

Data Center	Delta1 Trading Platform
Equinix NY4 - 755 Secaucus Rd.	Production
Equinix CH1 - 350 E. Cermak Rd.	Disaster Recovery User Acceptance Test

Production vs. Disaster Recovery

For performance reasons, the Delta1 Trading Platform runs its production instance at a single site. Customers looking for the lowest latency access should establish connectivity to the production site. In the case of a disaster, where we experience a loss of all on-site redundancies for the production instance, an instance of the Delta1 Trading Platform at the secondary site is activated. For full redundancy in a disaster scenario we highly recommend maintaining connectivity to both sites.
